More so, you can easily define a list of favorite directories, in case you want to move newly detected items to other locations without significant efforts. Session history Whenever a new file is detected in the directory you specified (for instance, when you download a document), you are prompted to choose an action, such as deleting the item, moving it to a bookmarked folder, moving it to previous targets or skipping the action. You can also access a session history by right-clicking the tray icon and selecting the appropriate action from the list. This section provides you with useful information such as detected file name, the monitored folder it belongs to and the date its status was updated. Lightweight download monitor that lets you manage your files efficiently All things considered, LoadStar is a reliable application that lets you monitor specific folders on your computer, detects new file activity and lets you perform an action such as moving or deleting the target item.
